Executive Summary

This report presents Metro Transit’s annual assessment of its transit network as required by King County Ordinances 17143, 18413, 19367 and Motion 13736. This 2022 System Evaluation uses the spring 2022 service change period from mid-March to mid-June. The report includes information about fixed-route, Dial-A-Ride Transit (DART), RapidRide, water taxi, and flexible services, all part of Metro’s expanding portfolio of mobility solutions. In late 2021, the King County Council adopted updated service guidelines, which are reflected for the first time in the 2022 System Evaluation.

Our Findings

The 2022 System Evaluation highlights the following investment needs in Metro’s fixed-route transit system:

- » Zero hours of service to relieve crowding (Priority 1)
- » 24,750 hours of service to improve reliability (Priority 2)
- » 1,644,200 hours of service in service growth (Priority 3) over the next 15 years in order to implement the Metro Connects interim network (or approximately 110,000 hours per year)

Making the investments identified in this report would improve reliability (Priority 2) and grow our service network (Priority 3).

With ridership still rebounding from the pandemic, no additional investments are needed to address crowding (Priority 1). However, the reliability investment needs increased from last year’s figure by about 18,250 annual hours. The new Priority 3 Service Growth methodology also highlights significant investment needs of over 1.6 million hours over the next 15 years. With ridership on the rise, regional growth in jobs and population, and increasing congestion on our roadways, the system evaluation priorities will require ongoing monitoring over the next year.

To achieve the full Metro Connects 2050 long-range vision and meet the demands of the Puget Sound Regional Council’s Transportation 2050 plan, we will ultimately need to provide approximately 3.6 million more annual hours of service.

Metro’s Prior Investment Activities

Metro invested over 118,000 annual service hours back into the transit system over the last three service changes in order to restore service on routes that were partially or fully suspended during the pandemic. Despite these investments, Metro continues to see overall bus reliability degrade and faces additional challenges in delivering future investments to the transit system. Sustained improvements in reliability will require additional service hours and infrastructure investments to mitigate the impacts of major construction projects and rising traffic congestion across the region. In addition, several nationwide challenges that emerged during the pandemic, including operator shortages and supply chain issues, are limiting Metro’s ability to restore and grow service to meet demand. Recent base capacity expansions and shifting investments from peak to all-day service are helping relieve some of these constraints, but the challenges continue to affect transit service quality and limit Metro’s ability to deliver additional service across the county.

Seattle Investments

Metro and the City of Seattle work together to plan and implement new service funded by the Seattle Transportation Benefit District (STBD; approved by voters in November 2014 and renewed in November 2020). As of spring 2022, the Seattle Department of Transportation is supporting 135,000 annual hours of service. In accordance with the contract between Metro and Seattle, Metro assumes funding for some of Seattle’s investments that are consistent with Metro priorities as we expand service.

RapidRide

Metro currently operates six RapidRide lines throughout King County. The RapidRide network is expanding with both the G Line and the H Line under construction, and the I Line and J Line in the planning and design stage.

RapidRide G Line is expected to start operating in 2024. RapidRide H Line is scheduled to launch in March 2023. Design of the I Line is 60% complete and it is scheduled to launch in 2026. King County Council adopted the legislation accepting the J Line alignment and stations, which is expected to launch in 2026. Design of RapidRide R Line is 10% complete, but the project has been paused since 2020 due to funding constraints spurred by the COVID-19 pandemic. Funding has been designated to complete preliminary design of the K Line and to complete a RapidRide Prioritization plan, which will organize RapidRide candidate lines into priority tiers based on evaluation factors of equity, environment, service demand, capital need, and implementation.

Marine Services

The Marine Division was added to the System Evaluation Report beginning in 2016 and became a division of Metro in 2019. The report now includes data on the King County Water Taxi service. The Water Taxi serves two routes that connect Pier 50 at Colman Dock in downtown Seattle with Vashon Island and West Seattle. Metro plans to maintain and improve current service on the two existing routes while studying potential future routes. Information about Water Taxi services are included in a dedicated section. Additional details are available in the Marine Services section of the report, and details on the evaluation methodology are included in Appendix A.

Flexible Services

This report includes performance data for pilot services that were operating in spring, between March 2022 and June 2022. The program works with local governments and community partners to develop innovative and cost-efficient transportation solutions in areas of King County that do not have the infrastructure, density, street network, or land use to support regular fixed-route bus service. Although many pilot services were suspended or discontinued in 2020 because of the pandemic, Metro has gradually restored several of these flexible services over the last two years. Metro will continue to monitor existing pilots and new flexible services that were launched during the pandemic.

Our Future

Future investments will be included in the county's biennial budget process. Operator shortages and supply chain challenges—which are not limited to King County—hamper Metro's ability to invest and deliver additional service hours in the transit system.

The needs identified in this report are only part of the 3.6 million service hours needed by 2050 to nearly double our ridership and achieve the Metro Connects vision. As we move toward achieving this vision, we aim to improve coordination with external agencies and jurisdictions to identify opportunities to deliver more service efficiently and effectively. The updated Service Guidelines use the new Metro Connects interim network as targets for service growth and help incorporate all of Metro's mobility services in a common framework for evaluation.

Introduction

What is the System Evaluation?

This report is a snapshot of the health of Metro’s transit system for fixed-route, Dial-A-Ride Transit (DART), water taxi, and flexible services. The System Evaluation provides the basis for decisions about adding, reducing, or changing service. It is based on Metro’s Service Guidelines, which establish criteria and processes Metro uses to analyze and plan changes to our transit system. The guidelines were updated in 2021 and adopted by the King County Council (Ordinances 18301,18413, 19367, and Motion 13736). The 2022 report contains the following sections:

- » Overview of COVID-19 pandemic impacts to the transit system
- » Fixed route and DART evaluation metrics
- » Integration with Sound Transit
- » RapidRide progress report
- » Flexible Services evaluation metrics
- » Marine service (Water Taxi) evaluation metrics
- » Appendices documenting the updated methods and data used for reporting

Reducing crowding and improving reliability—our primary service quality indicators—are Metro’s top two investment priorities, as they directly affect the quality of our service. Improvements in these areas help us keep the riders we have and attract new ones. Our third priority investment represents growing the system. Service growth lets us provide better mobility options and helps meet existing demand, reach climate action goals, and help the region’s economy to continue growing without expanding roadways.

How does Metro use the System Evaluation report?

We analyze data to learn how different services are performing, where problems exist in our system, and where we are not providing enough service. We combine this information with what we hear from customers, operators, and partners to develop proposals to change service. We take these proposals to the public, gather and incorporate feedback, and submit final plans for approval by the King County Council. After we make the approved service changes, the cycle begins again.

Our data analysis and the policies embedded in our Service Guidelines give us guidance on how to add, reduce, and restructure service. The Service Guidelines were recently updated in 2021—a crosswalk that highlights some of the changes in structure, format, and methodology is included on the next page.

How Can Transit Customers Use the System Evaluation Report?

Riders can find their route(s) on the maps and appendices in this report and can see how the route data compares to other routes in the system. They can easily identify problems on a route (such as crowding), and what is needed to fix those problems. This report provides a snapshot in time; some problems come and go, and Metro uses the latest available data to make service change proposals.

Updated Service Guidelines—Crosswalk of Changes

The 2022 System Evaluation is the first report to use the newest service guidelines approved in December 2021 by King County Council through Ordinance 19367. The most significant changes from the updated service guidelines are noted below.

Updated and new sections:

- » **Priority 1 (Crowding):** This section reverted back to using spring service data—fall service quality data was used for 2020 and 2021 to reflect more typical service measures during the pandemic.
- » **Priority 2 (Reliability):** This section reverted back to using spring service data—fall service quality data was used for 2020 and 2021 to reflect more typical service measures during the pandemic.
- » **Priority 3 (Service Growth):** This section replaced the old Corridor Analysis with a route level analysis, includes an additional equity analysis, and features new growth targets determined by the Metro Connects interim network.
- » **RapidRide Progress Report:** This new section is required by ordinance 19367.
- » **Flexible services:** This section includes an updated methodology and performance metrics, and features additional analysis to evaluate locations in the county for new potential flexible services.
- » **Marine services:** This section includes a slightly updated methodology and performance metrics.
- » **Appendices:** The appendices are updated to reflect new methodologies and evaluation metrics according to the 2021 Service Guidelines.

Removed sections:

- » **Priority 4 (Productivity):** No longer evaluated as a priority for service investments, but still included in the appendix for potential service reductions. The new methodology also uses equity to inform service reductions.
- » **Peak Analysis:** Although some reporting measures include breakdowns by day period, the peak analysis is no longer a component of the annual system evaluation.
- » **Metro Connects Progress Report:** This topic is now addressed separately through other reporting requirements.

COVID-19 Pandemic Impacts

The COVID-19 pandemic continues to have a significant impact on Metro service. Ridership declined dramatically in 2020 as people stayed home and limited travel. Metro reduced service on many routes and suspended others entirely. Growing Metro’s operator workforce is essential for improving transit service and restoring suspended routes. Metro is in the process of continually recruiting new operators and training part-time operators to become full-time operators. Metro will continue to recruit and train new operators for the foreseeable future. This section summarizes changes to Metro’s service and ridership, crowding implications, and equity impacts during the spring 2022 service-change period.

Service Changes during the Pandemic

- » **Spring Service Change:** From March–April of 2020, Metro reduced service across the system in a series of cuts to fixed-route bus, DART, flexible services, and water taxi services. By the end of April, Metro was operating at 75% of pre-pandemic service levels.
- » **Summer Service Change:** In June, Metro restored service to 85% of pre-pandemic levels. However, many non-peak Metro routes—including most routes in south King County—maintained more of their pre-pandemic ridership and provided full service throughout 2020.
- » **Fall Service Change:** For the September 2020 service change, Metro continued operating at 85% of pre-pandemic service, with 58 routes fully suspended and 21 routes partially suspended. Peak-only routes comprised 73% of all suspended routes. COVID-19 related load limits did not affect most trips because of low ridership.¹ However, some routes did have trips where rider demand reached or exceeded the load limits. Drivers passed up people at stops when buses had reached load limits. Most of these trips occurred in the mid-day or late afternoon on high-ridership routes serving areas with a high proportion of priority populations. Just a few routes, particularly the A Line, E Line, 7, and 36, regularly had trips exceeding the load limits. To address these “crowded” trips or buses passing up riders at stops, Metro added scheduled and unscheduled supplemental trips for routes at times where trips were regularly at or above the load limits. For the September 2020 service change, Metro added 24,000 service hours of scheduled service to three routes to accommodate riders on trips regularly at or above the load limits.

2021 Service Changes

- » **Spring Service Change:** With ridership gradually increasing, Metro added or restored service on 16 routes to maintain pandemic-related load limits and prevent crowding on popular routes. It also suspended trips on 10 peak commuter routes where ridership had not yet returned.
- » **Fall Service Change:** Metro restored service on 36 routes in October 2021, bringing transit system back to about 90% of pre-pandemic levels. This service change also included a major service restructure in north King County as a part of the Link light rail expansion to Northgate.

2022 Service Changes

- » **Spring Service Change:** Metro made minor cuts to service to align with existing workforce capacity. Capacity limitations hampered Metro’s ability to restore service during the spring 2022 service change and will likely impact subsequent service changes. These issues also resulted in a higher number of unplanned trip cancelations. Canceled trips are not reflected in the reliability evaluation methodology because they cannot be resolved through additional service hour investments.

¹ COVID-related load limits established maximum ridership capacity at 12 people for 40 foot buses and 18 people for 60 foot buses.

Ridership

The onset of the pandemic in March 2020 resulted in a dramatic decline in ridership. However, many non-peak Metro routes—including most routes in south Seattle and south King County—maintained more of their pre-pandemic ridership and provided full service throughout 2020. Ridership continues to recover across the system. Between the spring 2021 and spring 2022 service changes, average weekday ridership increased by 42%, a net increase of 64,000 daily boardings. Although ridership continues to rise, it has not yet recovered to pre-pandemic highs.

The ridership patterns throughout the day varied during the pandemic. Ridership declined more during the AM and PM peak periods than in off-peak periods. The ridership recovery information below compares May 2022 ridership data to pre-pandemic totals in May 2019.

- » **AM Peak ridership:** the morning peak period from 5–9 a.m., which initially saw the largest decline in ridership in the first year of the pandemic, has rebounded to 36% of 2019 levels.
- » **PM Peak ridership:** the afternoon peak period from 3–7 p.m. has recovered 42% of pre-pandemic ridership.
- » **Mid-Day and Evening ridership (off-peak):** The mid-day period from 9 a.m.–3 p.m. and the evening period from 7–10 p.m. both recovered 54% of pre-pandemic ridership.
- » **Night ridership:** The night service period from 10 p.m.–5 a.m. recovered 62% of pre-pandemic ridership.

Ridership changes by route also differed considerably by the type and location of the route. As expected, routes with the largest declines in ridership were peak-only and infrequent routes. Routes with the smallest declines were generally frequent, all-day routes; routes serving south Seattle and south King County; and RapidRide routes.

On-Time Performance

A positive outcome for service early in the pandemic was improved on-time performance. Traffic congestion decreased because more people were working at home and limiting non-essential trips. As a result, on-time performance initially increased dramatically at the start of the pandemic. On-time performance then dropped because buses arrived too early and ran ahead of schedule. Metro responded by adjusting schedules to account for less traffic congestion for the September 2020 service change. After the September 2020 service change, on-time performance increased to over 80%. In 2022, Metro observed a slight reduction in on-time performance to about 78%. This reduction is a result of rising congestion and an overall increase in travel as the region recovers from the pandemic. In comparison, on-time performance was around 76% for the same period in 2019.

Equity Impacts

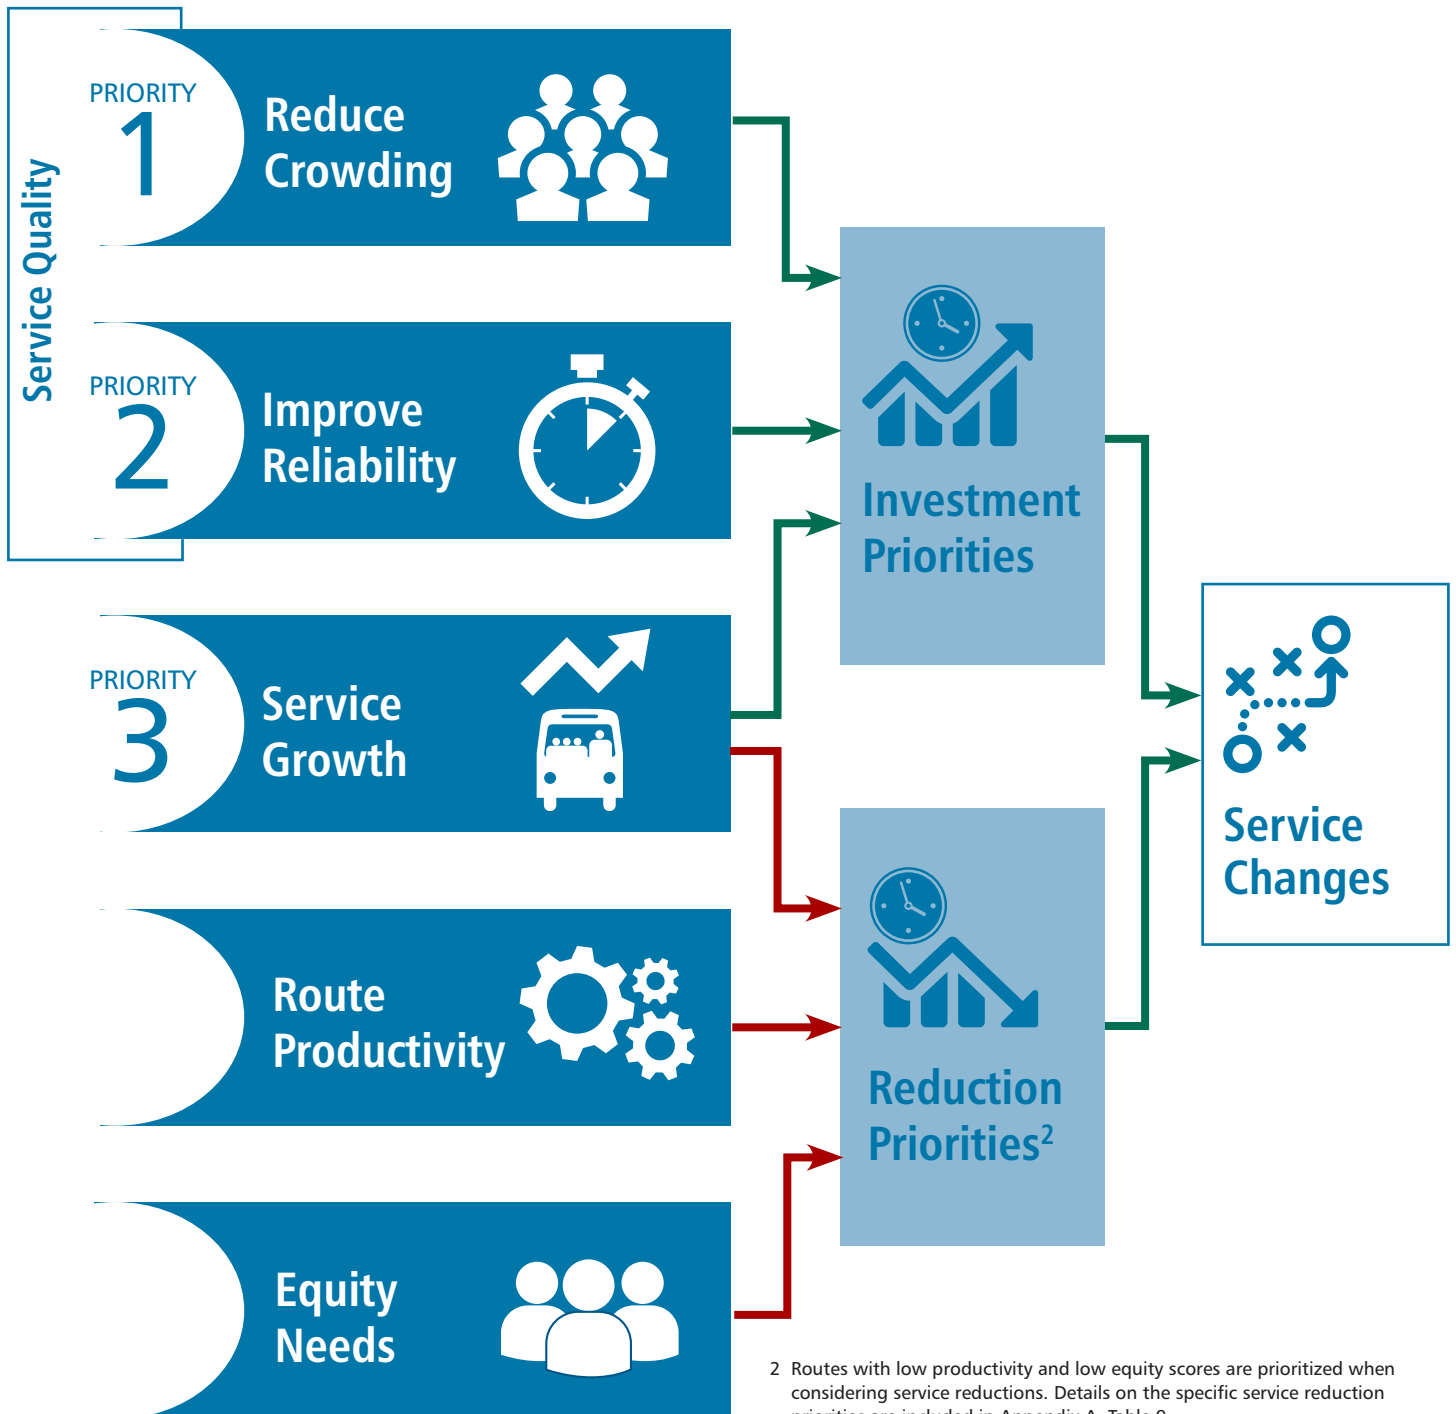

Overall, the COVID-19 pandemic demonstrated the critical role of transit in providing mobility for essential workers, those unable to telecommute, and others who rely on transit. The ridership patterns and related service changes in 2020 highlight the specific services, routes, and times of day that support these essential trips.

Metro gives each route an Opportunity Score (1-5) based on the extent to which a route is judged to serve priority populations as defined in the Service Guidelines. Routes with high Opportunity Scores (4 or 5) retained more of their ridership than other routes since the start of the pandemic in 2020. Many of these routes serve south Seattle and south King County. Due to the large drops in ridership observed early in the pandemic, ridership recovery has been increasing at a faster rate on routes with lower opportunity scores (1-3). Overall, ridership is still higher on the routes with high opportunity scores.

The data and trends revealed during the pandemic provide valuable insights into who continued to use Metro services and where and when riders are returning to the system. For example, school and university students are bolstering Metro's ridership with the return to in-person classes. As a result, Metro has adjusted schedules on some routes to accommodate higher loads at certain times. These lessons can be carried forward in planning for the growth and improvement of the Metro system.

Fixed Route Service Evaluation

How the system evaluation informs service changes

² Routes with low productivity and low equity scores are prioritized when considering service reductions. Details on the specific service reduction priorities are included in Appendix A, Table 9.

Bus Service Evaluation

Crowding (Priority 1)

What is Crowding?

Crowding needs in the system evaluation are defined by the following factors:

- » The vehicle's average maximum load is more than the crowding threshold for the type of vehicle.
- » The average passenger load is more than the number of seats for 20 or more minutes.
- » Trips must be crowded consistently for several months to be identified for investment.

Findings

The 2022 System Evaluation found that zero bus hours are needed to reduce crowding. Although ridership is on the rise, it is still relatively low from the ridership declines during the pandemic and no routes had chronically crowded trips.

What's Been Done

No additional investments were needed between fall 2020 and spring 2022 to reduce crowding as defined in the Service Guidelines.

What's Next?

As ridership continues to recover across the system, Metro will continue to monitor ridership trends, including employees returning to central workplaces and students attending class, to understand when and where to expect ridership growth and potential crowding.

Reliability (Priority 2)

What is Reliability?

In a transit context, reliability refers to the extent to which buses arrive on time. Metro considers routes to be candidates for investment when buses do not arrive on time or fail to meet their scheduled headways more than 20% of the time all day. To improve reliability, Metro can invest by adding running time to schedules, and partner with cities on infrastructure improvements. These improvements help buses move faster and more reliably, saving money and providing a better customer experience.

Findings

The 2022 System Evaluation found that 24,750 additional bus hours are needed to improve reliability. The investment need increased from last year's figure by about 18,250 annual hours. This report lists 40 routes needing investment; nineteen of them are new to the list. Seventeen routes on last year's list are now within standards, and fifteen routes that were on last year's list are no longer active routes. The rest have new or outstanding needs.

See Appendix C for route-by-route reliability numbers.

- » **South county routes:** Ten routes were identified as needing reliability investments. Routes 113, 120, 128, 193E, and the A Line are new to the list. The other five (106, 124, 125, 131, and 132) still have outstanding needs. The investment needs are relatively small.
- » **East county routes:** Four routes were identified as needing reliability investments. One route on the list, 208, was also on last year's list, and all four routes (208, 250, 271, and the B Line) have relatively small investment needs.
- » **Seattle routes:** Twenty-six routes were identified as needing reliability investments. The eleven routes that are new to this list are routes 20, 27, 31, 32, 44, 45, 49, 67, 70, 75, and the D Line. The other 15 routes still have outstanding needs.

What's Been Done

From spring 2021–2022, there has been a modest hours savings to address reliability, as defined in the Service Guidelines. Although the 2021 System Evaluation highlighted a small investment need of 6,500 additional service hours, all service investments noted in this evaluation prioritized restoring partially and fully suspended service from the pandemic. At the same time, the recent declines in ridership and traffic have allowed Metro scheduling to shift its primary focus from lateness-related service reliability issues (which require investment), to earliness related service reliability issues (which are either cost neutral or sometimes involve savings). Earliness remains the current focus, though Metro continues to monitor the system for any evidence of service reliability issues in either direction, late or early.

What's Next?

Metro uses various tools to improve reliability across the system. For example, active headway management helps Metro monitor and prevent bus “bunching” across the transit system and ensures that buses can adhere to their frequent schedules throughout the day. Additionally, Metro's speed and reliability infrastructure investments help facilitate large improvements in the rider experience. However, traffic congestion is increasing as the region and economy recovers from the pandemic. Reliability remains a concern for 2022 and the future.

Metro will monitor routes and adjust schedules to reflect evolving conditions while continuing to seek opportunities to provide transit-supportive infrastructure that enables fast and reliable transit service as travel demand increases.

Figure 1. Metro Bus Routes Needing Investment to Improve Reliability per the Service Guidelines

Service Growth (Priority 3)

What is Service Growth?

Service growth is based on routes' target service level. The Service Guidelines include criteria for determining target service levels (how often buses should arrive throughout the day in Metro's existing system). The target service level for each route is based on the higher of either the Metro Connects interim network value or the service growth methodology, which uses land use, equity, and geographic value factors to establish a target service level. The gap between how much service Metro currently provides and how much service is needed constitutes the investment needed to meet target service levels. Investment needs recommended in this section include any service hour gaps caused by suspended services.

Table 1: Summary of typical service levels

Service	Service Level: Frequency (minutes between trips) and Time Period				Days of Service	Hours of Service
	AM Peak (5–9 a.m.) PM Peak (3–7 p.m.)	Off-peak (9 a.m.–3 p.m., 7–10 p.m.)	Night (10 p.m.–5 a.m.)	Weekend (Sat.–Sun.)		
Very frequent/ RapidRide	<= 10 mins	<= 15 mins	<= 15 mins	<= 15 mins	7 days	16–24 hrs
Peak Frequent	<= 15 mins	<= 30 mins	<= 30 mins	<= 30 mins	7 days	16–24 hrs
Local	<= 30 mins	<= 30 mins	<= 60 mins	<= 60 mins	5–7 days	12–18 hrs
Hourly	<= 60 mins	<= 60 mins	--	--	5 days	8–12 hrs
Peak-only	8 trips/day minimum	--	--	--	5 days	Peak
Flexible Services	Determined by demand and community collaboration process					

Findings

To meet target service levels envisioned in the Metro Connects interim network or the service growth methodology, service needs to grow on 114 routes by approximately 1,644,200 service hours.

- » **Current network:** 99 existing routes need 1,352,500 additional service hours
- » **Metro Connects routes (no current service):** 13 new routes need 291,700 additional service hours

Typically, this analysis would compare 2022 service growth needs to 2021. However, the service growth methodology changed significantly due to the adoption of new service guidelines in 2021, updated targets in Metro Connects, and updated data from the 2020 census. Furthermore, the 2021 System Evaluation did not include the service growth analysis because the data for that timeframe was not representative of typical conditions due to the pandemic and suspension of many Metro services.

The maps on the following pages show service growth needs by route and time of day.

What's Been Done

Since 2020, network growth focused on restoring services that were suspended or reduced during the pandemic.

Through the Renton-Kent-Auburn Area and North Link Connections mobility projects implemented in 2020 and 2021, respectively, Metro redesigned bus service networks to focus service resources on identified service needs, including those identified for service growth in Metro's System Evaluation. Also, Metro added service on selected high-ridership routes to provide additional capacity and further address needs for service growth in March 2021.

What's Next?

Metro's top priority is to bring back currently suspended service hours to respond to changing travel needs throughout the county while centering on the needs of priority populations. As King County continues to grow, investments in Priority 3 remain important. Metro plans to continue working to expand mobility based on available resources. As we look at future projects and investments, we will use the analysis of Priority 3 needs to inform service proposals.

The Complete Network: Integration with Sound Transit

Metro and Sound Transit continue joint planning together and with jurisdictions. Our collective goal is to create an integrated network that gives riders the best possible transfers as Link light rail continues to expand. Our coordinated work will maximize the total regional investment in transit service.

In October 2021, Sound Transit opened three new Link stations in north Seattle, extending from University of Washington–Husky Stadium to Northgate Transit Center. Together with the opening of the Link extension, Metro implemented the North Link Connections Mobility Project in north King County. The project serves the north Seattle, Shoreline, and North Shore communities. The project provides an updated mobility network that integrates with and complements Link.

Sound Transit is currently partnering with Metro (co-leads) on the East Link Connections Mobility Project and with Metro and Community Transit on the Lynnwood Link Connections Mobility Project. Through these projects, the transit agencies will restructure their respective bus networks to complement the Link extensions to Redmond Technology Station and Lynnwood. Metro is preparing for this expanded Link service by improving transit connections throughout the county as Link service expands. Metro and Sound Transit are coordinating with their many agency and jurisdictional partners to meet the area’s diversity of mobility needs, including integration with Link. This coordination will offer current and future Metro

customers fast, frequent, and reliable connections to jobs, education, and other opportunities that advance social equity for all. Similar to the East Link and Lynnwood Link restructure efforts, Metro is engaging with Sound Transit and Pierce Transit on the Federal Way Link Extension project for a major south King County restructure (Federal Way Link Connections).

Last, Metro is participating in planning, design, and environmental review for the West Seattle and Ballard Link Extensions, Tacoma Dome Link Extension, 130th Street Infill Station, I-405 BRT, SR 522/NE 145th BRT, and Kent Station Parking and Access Improvements projects.

Table 2 lists key corridors in King County where Sound Transit is the primary provider of two-way, all-day transit service. As Link service continues to expand, Sound Transit will become the high-capacity transit provider in more corridors. As services are introduced and modified, Metro and Sound Transit will continue to integrate them to maximize mobility.

Table 2. Corridors Served Primarily by Sound Transit

Between	And	Via	Major Route
Woodinville	Downtown Seattle	Bothell, Kenmore, Lake Forest Park, Lake City	522
UW Bothell	Bellevue	Totem Lake	535
Redmond	Downtown Seattle	Overlake	545
Bellevue	Downtown Seattle	Mercer Island	550
Issaquah	Downtown Seattle	Eastgate, Mercer Island	554
Burien	Bellevue	SeaTac, Renton	560
Auburn	Overlake	Kent, Renton, Bellevue	566
SeaTac	Federal Way	I-5	574
Federal Way	Downtown Seattle	I-5	577/578
Angle Lake	University District	SeaTac, Rainier Valley, downtown Seattle, Capitol Hill	Link light rail

RapidRide Progress Report

RapidRide is a network of easy to use, high-quality, and convenient bus rapid transit lines, and it is an integral part of the region’s high-capacity transit network. Metro’s RapidRide service includes many important features.

- » **Frequent and reliable service:** RapidRide buses are more frequent and stay on time more often, with added service at night and on weekends.
- » **Bus stop upgrades:** RapidRide stations include better lighting, signs with real-time arrival information, and more seating.
- » **Better access:** Metro is working with local cities to improve sidewalks, street crossings, and other pathways to bus stations to ensure a safe and convenient experience.

Metro currently operates six RapidRide lines throughout King County. The RapidRide network is expanding with the G Line and the H Line currently under construction, and I Line and J Line in the planning and design stage. Following the J Line, Metro is planning two additional RapidRide lines, the K Line, and the R Line. Planning for these two lines started in 2019, but both projects were paused in response to the financial impacts of the COVID-19 pandemic. Design of RapidRide R Line is 10% complete, including conceptual improvements to speed and reliability, passenger facilities, communications and technology, and access to transit. If funding were to become available as a part of the 2023–2024 biennial budget, the project could be reactivated by spring 2023.

Table 3: RapidRide Expansion Status Update

Route name	To / From / Via	Comparable Route(s)	One-Way Miles	Project Status	Expected Opening	Federal Funding (FTA) Funding
G Line*	Madison Valley - Seattle CBD - E Madison St	11, 12	2.4	Construction	2024	Small Starts grant, American Rescue Plan funding, & Congestion Mitigation and Air Quality Improvement funding
H Line	Burien – Seattle CBD – Westwood Village	120	13.8	Construction	2023	None
I Line	Renton – Auburn – Kent	160	17.9	Design - 60%	2026	Pending Small Starts Grant
J Line*	U. District – Seattle CBD – Eastlake	70	5.2	Design - 60%	2026	Pending Small Starts Grant, Congestion Mitigation and Air Quality funding, & Surface Transportation Program funding

RapidRide Prioritization Plan

Metro adopted an updated Metro Connects long-range plan in December 2021 which envisions a significant expansion of the RapidRide network. The ordinance adopting Metro Connects requires the creation of a RapidRide Prioritization Plan to determine the specific candidate corridors to be developed as part of the interim network.

The RapidRide Prioritization Plan will determine the number and specific candidates to be developed as RapidRide lines as part of the interim network after the K and R lines are developed. The evaluation of the candidates will lead with racial and social equity and sustainability to update the evaluation factors (equity, environment, service demand, capital need, and implementation) used in the Metro Connects RapidRide assessment and in creating a new prioritization framework. The prioritization framework will organize RapidRide candidate lines into tiers by their priority and potential timeframe for implementation. The top tier RapidRide candidates will include those planned to be implemented for the interim network and the second tier will be the lines next to be developed if additional funding becomes available. The third tier will include candidate routes not prioritized for development as part of the interim network.

Table 4 summarizes the performance of the closest equivalent routes for each candidate corridor. The service growth factors in the System Evaluation are not measures of performance but are included in Table 4 because they have similarities to some evaluation factors included in the prioritization plan.

Table 4: Interim Network RapidRide Candidate Corridors³

RapidRide Candidate Corridor ID (Metro Connects)	Current Route Equivalent	Service Demand	Service Quality factors		Service Growth factors		
		Ridership (weekday)	Crowding (weekday)	Reliability (weekday)	Equity Score (2–10)	Land Use Score (2–26)	Geographic Value Score (2–10)
1027 (K)	255	2,069	-	6.3%	2	11	10
	271	2,270	-	12.3%	4	11	10
1071 (R)	7	8,515	-	11.3%	6	21	7
1012	44	4,733	-	16.1%	2	21	7
1049	150	3,734	-	11.4%	6	15	10
1052	181	1,384	-	9.6%	6	4	10
1056	165	2,113	-	8.1%	4	4	7
1064	36	5,795	-	10.8%	8	20	7
	49	2,428	-	22.7%	4	22	10
1993	40	6,383	-	17.6%	2	21	10
1999	B Line*	3,305	-	14.4%	6	15	10
3101+1028	B Line*	3,305	-	14.4%	6	15	10
	271	2,270	-	12.3%	4	11	10

*RapidRide weekday reliability is based on headway adherence analysis

Flexible Services

Metro’s flexible services program complements fixed-route bus service across King County where the fixed-route network isn’t meeting community needs on its own. These services develop and advance projects that build Metro’s understanding and experience with new, innovative mobility solutions.

A defining feature of the flexible services program is the ability to launch, test, and refine innovative service solutions in partnership with communities. These services leverage Metro’s long-standing success in both DART and ridesharing services in combination with emerging mobility technologies. In addition to the current pilot services described below, Metro is continuing to develop new products and services through ideas that emerge from community partnerships and needs, as well as emerging national and international best practices for mobility services.

Pilot Services

Metro offers various types of innovative flexible services through the pilot programs listed below.

- » **On-Demand:** Users can hail trips on-demand using a phone or mobile app to and from a transit, or other community resource hubs, or for local trips point-to-point within a service area. Ongoing pilots in On-Demand service include Community Ride, Via to Transit, and Ride Pingo.
- » **Community Shuttle:** Metro routes with flexible service areas, provided through community partnerships.

Pilot Service Performance

Metro collects and analyzes ridership data for pilot services deployed through the flexible services program.

Existing flexible services are evaluated based on productivity, efficiency, and equity. Pilot services in operation during spring (March 2022–June 2022) are listed in Table 5. Appendix A includes additional details on the methods used to evaluate performance.

Table 5: Pilot Service Performance in Spring (March 2022 to June 2022)⁴

Service	Rides per Vehicle Hour	Cost per Boarding	% of riders picked up/dropped off in Equity Priority Area	Launch Date
Community Ride – Juanita	1.15	\$115.00	39%	September 2020
Community Ride – Sammamish	2.09	\$60.00	12%	June 2019
Community Shuttle – Des Moines (Route 635)	4.61	\$31.00	20%	January 2018
Via to Transit – Othello	2.76	\$15.23	93%	April 2019
Via to Transit – Rainier Beach	3.62	\$11.62	93%	April 2019
Via to Transit – Tukwilla	3.02	\$13.93	88%	April 2019
Via to Transit – Renton Highlands	3.27	\$12.86	87%	August 2021
Via to Transit – Skyway	1.95	\$21.62	64%	August 2021
Ride Pingo – Kent Industrial Valley	1.51	\$83.00	95%	September 2021

What’s Next

Metro initially suspended operations of many flexible services along with other Metro services during the COVID-19 pandemic. Small vehicle size was a particular challenge for flexible services during the pandemic because of the need to ensure safety for customers and drivers. Metro took actions such as using barriers between customers and drivers, requiring masks, and limiting loads on flexible services as well as on bus service. More recently, the focus of Metro has shifted to restoring these suspended services. Via to Transit service was restored in June 2020 and Sammamish Community Ride was restored in September 2020. Trailhead Direct was canceled for the 2020 season (April to September) and later restored with reduced service for the 2021 and 2022 seasons.

Despite these challenges, Metro also launched new, additional flexible services pilot programs during the pandemic. Although it was delayed by the pandemic, Metro launched the Juanita Community Ride in September 2020. Flexible services pilots launched in 2021 included the expansion of Via to Transit into Renton Highlands and Skyway, and the Kent Industrial Valley Ride Pingo on-demand service. Most of these new services were developed as part of the Renton-Kent-Auburn Area Mobility Plan and the North Eastside Mobility Project. For these projects, Metro engaged communities to assess needs and develop flexible services that complement bus service changes, contributing to expanded mobility.

In addition to providing annual data in the system evaluation, Metro will continue to monitor and improve both existing and new flexible services (launched during the pandemic). Although some newer pilots have higher costs than longstanding ones, Metro will make occasional adjustments to improve efficiency and increase ridership. Such changes will include marketing campaigns to boost awareness, and adjusting service levels or areas. These changes will allow Metro to maximize the effectiveness of services during the pilot period, serve locations outside of our fixed route transit network, better meet the demand for each service, and keep costs low. Furthermore, Metro will continue to evaluate how each flexible service aligns with agency policies around equity and sustainability. If a pilot program consistently meets both the community needs and staff expectations during evaluation, and funding is available for sustained service, Metro may recommend individual pilots be converted into permanent programs.

⁴ Via and Ride Pingo services are calculated on a weekly basis and use data from February 28–June 29, 2022.

Developing New Flexible Services

King County Metro works closely with jurisdiction partners and flexible services providers to develop new flexible service pilots. A new component of the annual system evaluation is a county-wide analysis to prioritize locations with conditions conducive for successful on-demand pilots, continued learning, and innovation.

To determine which locations would be best served by new flexible services, Metro evaluates over 140 Transit Connection Locations (TCLs), which includes transit activity centers, park and rides, Link stations, transit centers, and other types of transit hubs.

The evaluation measures used for this analysis are included below in Table 6.

Table 6: Prioritizing Locations for New Flexible Services

Factor	Measurement
Transit Connection Location Service Area	Includes a 2-mile walkshed around the primary facility and excludes the closest 1/4 mile buffer around the connection location (which is already within walking distance of the transit network).
Screening Criteria	Equity – average equity priority area score for the block groups in the service area is within the top 40 percent of all Transit Connection Locations.
	Density – service area has a moderate population density between 5–18 people per acre. Denser areas would be a stronger candidate for fixed route service, and less dense areas would lack the demand to support a new flexible service.
Scoring Criteria (accessibility)	Access scores determine the extent that a new flexible service would improve the surrounding area's ability to get to jobs and other community assets. Scores are broken into quintiles - a high score of 5 indicates the largest improvement in access and the low score of 1 denotes the smallest improvement in access to these resources.
Implementation	Implementation of new flexible services is contingent on resources, including staff time and funding.

The map on the next page shows potential locations for flexible services across the county. Each potential area is centered around a Transit Connection Location and includes a 2-mile walkshed. Each location is shaded based on how well it meets the screening and scoring criteria from Table 6. This analysis serves as one of many tools to help identify potential locations for new pilot services. Restructures, partnerships with jurisdictions, input from the community, grant funding, and other factors create opportunities for identifying potential locations and implementing new flexible services. Additional details on the flexible services methodology are included in Appendix A.

Figure 10. Flexible Service Potential Prioritization – Spring 2022, Accessibility of Service Areas⁵

5 Prioritized locations for new flexible services meet both density screening criteria (between 5 and 18 people per acre) and equity screening criteria (equity rank in the top 40%).

Marine Service

Metro’s Marine Division operates water taxi service in King County. As of September 2022, Metro operates two water taxi routes. The Vashon Island/downtown Seattle route provides year-round service during weekday commute periods. The West Seattle/downtown Seattle route provides a similar weekday commuter ferry service year-round and expands in the summer to include all-day service, seven-days-a-week, and late-night service on Friday and Saturday.

Water Taxi Performance

Metro monitors water taxi performance with four performance measures: ridership, productivity, passenger loads, and schedule reliability. Please see Appendix A for the method used to develop performance measures. See Table 7 for a summary of service performance from March 2022 to June 2022.

What’s Been Done

In response to the pandemic and the resulting drop in ridership in 2020, Metro maintained the winter schedule for water taxi service throughout the year, with commute period service only for both routes. In April 2020, commute service was further reduced to two round trips to West Seattle and one round trip to Vashon. From May through October 2020 the water taxi returned to providing commute period service for both routes on a Monday-through-Friday only schedule. Metro restored daily service on the West Seattle route for the summer season, with daily service every day, all day, and late nights on Friday and Saturday. As part of the West Seattle high bridge closure mitigation, the City of Seattle funded additional water taxi and shuttle services in fall 2021. Metro maintained summer midday and weekend service throughout the winter from October 2021 through March 2022 to provide alternate transportation options.

What’s Next

While no major service changes are planned for the West Seattle and the Vashon Island routes, the West Seattle route will maintain the increased summer sailing schedule through the winter service period (except for increased evening service on Fridays and Saturdays). Service will be continuously monitored based on ridership recovery.

Table 7. Marine Service Data: March 15, 2022–June 15, 2022

Route	Average Weekday Boardings	Average Saturday Boardings	Average Sunday Boardings	Average Rides per Round Trip	Trips operating at over 95% of Capacity	Percent Late Trips
West Seattle	791	1179	834	55	0	0.42%
Vashon Island	285	NA	NA	48	0	0.51%

Appendix A: Methodologies and Process Descriptions

Fixed-Route Service Growth

Crowding (Priority 1)

Data is processed for two metrics: crowding and 20-minute standing loads.

Crowding. Data from Automated Passenger Counters (APCs) are collected, validated, cleaned, and compiled for each unique trip in the system (for example, the Route 5 trip that leaves Shoreline Community College at 5:15 a.m. on weekdays). Metro uses several months of data to determine the average maximum load on each trip. This figure is compared to the crowding threshold of the scheduled coach assignment. Each coach type Metro operates has its own crowding threshold. This threshold is determined by adding the number of seats on the coach to the number of standing passengers the coach can accommodate if each passenger has at least 4 square feet of floor space. For example, a coach with 50 seats and 100 square feet of floor space available for passengers to stand would have a crowding threshold of $50 + 100/4 = 75$. If a trip's average maximum load is greater than its crowding threshold, it is then determined if other trips that arrive within 15 minutes have the capacity to take the excess load without being overcrowded themselves. If excess capacity does not exist, the route is identified as needing investment. This process prevents Metro from adding too much capacity where it already exists. Estimated investment need is based on the number of hours it takes to provide a trip on the identified route in the identified time period.

Twenty-minute standing loads. Metro compiles data from APCs for each unique trip in the system. Several months of data is used to determine the average departing load from each bus stop served by the trip. The data is also used to determine the average time when buses leave each stop (known as the "passing minute"). These data are then processed to determine whether the passenger load exceeded the number of seats on the scheduled coach assignment for a period of at least 20 consecutive minutes. Where this happens, other trips that arrive within 15 minutes are checked to determine if they have the capacity to take those standing passengers without having standing loads themselves. If excess capacity is not found, the route is identified as needing investment. Note that this measure does not determine if any individual passengers were standing for more than 20 minutes, as Metro is unable to collect such data. Investment need is estimated as above.

Reliability (Priority 2)

On-time performance is measured by comparing actual arrival times at bus stops to scheduled arrival times. Buses that arrive at bus stops up to 1.5 minutes before the scheduled time and up to 5.5 minutes after the scheduled time are considered on time. This allows for random variations resulting from operating in mixed traffic without prompting an unnecessary allocation of resources. All arrivals at stops are recorded by systems on the bus. For the System Evaluation, late arrivals are analyzed by route and by time period.

RapidRide service reliability is determined by headway adherence for weekdays because the route runs more frequently than every 15 minutes. When scheduled headways are between 1 and 7 minutes, actual headways at stops within two minutes of scheduled headways are considered acceptable. When scheduled headways are between 8 and 15 minutes, actual headways at stops within three minutes of scheduled headways are considered acceptable.

Metro evaluates reliability over three time periods, including weekdays, Saturdays, and Sundays. For each route and time period, Metro calculates the percentage of late arrivals at stops (more than 5.5 minutes after the scheduled arrival time). Routes that arrive late more than 20% of the time are identified for reliability investments. Metro estimates these investment needs by calculating how much additional service a route needs to meet the 20% goal.

Methodologies and Process Descriptions continued

Service Growth (Priority 3)

Metro uses the higher of target service levels from the Metro Connects interim network⁶ and a service growth methodology from the Service Guidelines to establish a route’s target service level, calculate the necessary investment to meet that target, and determine the relative priority for each route. Additional details on the growth methodology are included in table 8.

Table 8: Service growth methodology

Factor	Priority	Weighting (investment needed)	Purpose	Measures
Equity	1	25%	Serve communities where needs are greatest.	Equity Prioritization Score
Land Use	2	50%	Support areas of higher employment and household density, areas with high student enrollment, and the function of park-and-rides in the transit network.	(1) Households within quarter mile (2) Park-and-ride stalls within quarter mile (1) jobs within quarter mile (2) low-income jobs within quarter mile (3) enrolled students at high schools and colleges within quarter mile
Geographic Value	3	25%	Provide appropriate service levels throughout King County for connections between all centers.	(1) Connection between regional growth centers (2) Connection between activity centers (3) Connection between manufacturing & industrial centers

Metro evaluates different measures in equity, land use, and geographic value to develop a series of scores for each route. These scores are converted into service hours and compared to the target service levels envisioned for the interim network to determine which value higher—the largest value determines much additional service Metro needs to invest in each route. These service hour investment needs are prioritized by route in the following order.

1. **Equity score:** determined by the proportion of priority populations within each census block with a bus stop.
2. **Land Use score:** determined by the number of households, park and ride stalls, jobs, low-income jobs, and enrolled students at high schools and colleges within a quarter mile of the route.
3. **Geographic Value score:** determined by how well the route connects regional growth centers, activity centers, and manufacturing and industrial centers in the county.

⁶ The Metro Connects interim network envisions the fixed-route Metro transit network before the implementation of the West-Seattle Ballard Link Extension. Prioritizing these investments needs by route helps the agency make these investments gradually over the next 15 years.

Methodologies and Process Descriptions continued

Fixed Route Service Reductions Methodology

Priorities for reduction are listed in the table below. Productivity and equity measures are used to prioritize candidates for service reduction. Routes with low performance on the productivity measures, and specifically those that also have low equity scores, are generally the first to be prioritized for reduction. Within all priorities, Metro ensures that equity is a primary consideration in any reduction proposal, complying with all state and federal regulations.

The priority list is intended to address reductions to multiple trips within a time period, cuts to all service in a time period, or deletion of routes. Individual low-performing trips may also be considered for reductions outside of the priority list.⁷

Table 9: Priorities in fixed route service reductions

Priority	Factors
1	Routes within the bottom 25% on both productivity measures and with Opportunity Index Scores of 3 or less
2	Routes within the bottom 25% on both productivity measures and with Opportunity Index Scores of 4 or 5
3	Routes within the bottom 25% on one productivity measure and with Opportunity Index Scores of 3 or less
4	Routes within the bottom 25% on one productivity measure and with Opportunity Index Scores of 4 or 5
5	Routes within the bottom 50% on one or both productivity measures and with Opportunity Index Scores of 3 or less
6	Routes within the bottom 50% on one or both productivity measures and with Opportunity Index Scores of 4 or 5

Flexible Services

Evaluating Existing Flexible Services

Flexible services are evaluated in terms of productivity, efficiency, and equity.

Table 10: Evaluating Existing Flexible Services

Type of Measure	Description
Productivity: Rides per vehicle hour	Number of total riders who board a vehicle relative to the total number of hours that a vehicle operates
Efficiency: Cost per boarding	Cost per boarding relative to the cost of operating the service
Equity: Boardings/exits that are in equity priority area	Total number of boardings or exits which are in an equity priority area relative to the total number of boardings or exits

⁷ This 2022 System Evaluation report did not classify routes into the top and bottom 25% because suspended and partially suspended routes skew relative performance.

Adding New Flexible Services

To determine which locations would be best served by new flexible services, Metro evaluates over 140 Transit Connection Locations (TCLs), which include transit activity centers, park and rides, Link stations, transit centers, and other types of transit hubs. These TCLs (and their surrounding 2-mile walkshed) are evaluated using both screening criteria and evaluation measures. This approach helps identify areas that lack sufficient access to the existing transit network and would benefit the most from a flexible service.

Flexible Services Screening Criteria

- » **Population density:** between 5–18 people/acre within the 2-mile walkshed buffer, excluding the quarter mile walkshed around the TCL center point. This analysis omits those living within a quarter mile of the TCL because they are considered within walking distance of the transit facility and would be unlikely to use the flexible services. This range of density seeks to serve areas with sufficient demand for service, while also excluding more populous areas of the county with existing, robust transit service.
- » **Equity priority area score:** TCLs meeting the density screening criteria are given an Equity Priority Score based on the block groups covered by their service area. Only the top 40% of the transit connection locations move forward for scoring in access to jobs and community assets. This screening criteria prioritizes areas in King County with proportions of priority populations greater than the median block group. Additionally, this analysis omits households within a quarter mile of the TCL because they are considered within walking distance of the transit facility and would be unlikely to use the flexible services.

Flexible Services Evaluation Measures

- » **Transit access to jobs and community assets:** TCLs are evaluated based on the difference in access to jobs and community assets between the center point and the surrounding 2-mile walkshed. The greater the difference, the higher the score. This approach prioritizes TCL service areas that serve to gain the most relative mobility throughout the county with the addition of a flexible service.

Implementation

- » **Available resources and partnerships:** This analysis will serve as a guide for jurisdictions or other partners offering to fund pilots to make partner investments that are equitable and more likely to succeed. Likewise, Metro's pursuit of grants or use of available funds will look for the highest ranked locations and coordinate with service restructures. Projects that already have resources (money or staffing) or an active partnership in place are considered strong candidates for pilots.

Marine Service

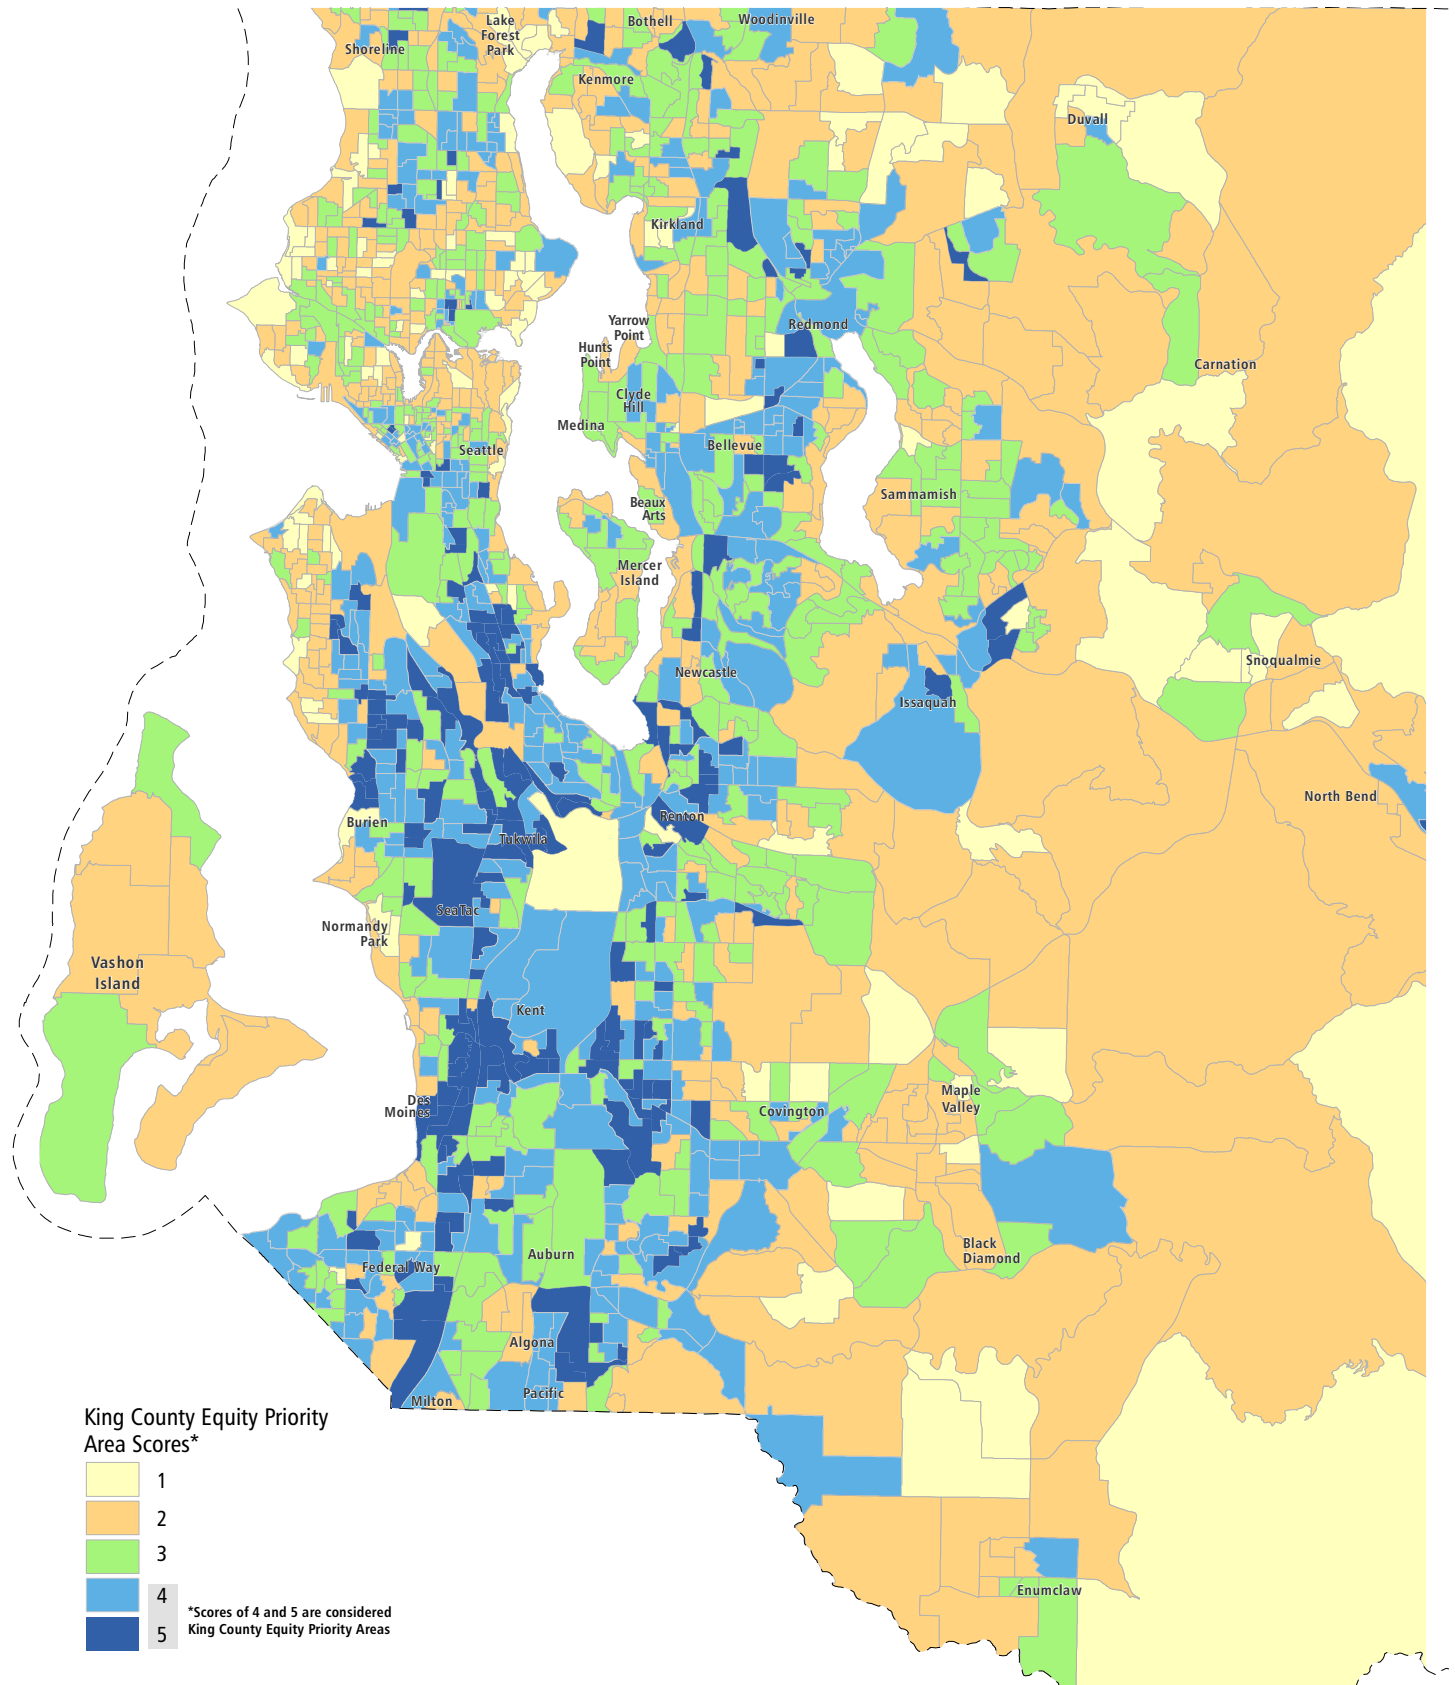

Metro monitors performance and manages marine services using a set of performance measures included in the System Evaluation Report. The Marine Division uses these measures to determine when and where to consider adding service through an expanded service window or additional vessels serving the route, reallocating service from existing routes, or adjusting schedules to improve performance. Four performance measures are used to evaluate ferry service performance: ridership, service productivity, passenger loads, and schedule reliability.

Table 11: Evaluating Marine Services

Type of Measure	Measures Used
Ridership: Average daily boardings	Average daily ridership is measured and reported for each route for weekdays, Saturdays, and Sundays.
Productivity: Riders per round trip	Total passengers per round trip include the average number of riders on a vessel for both the initial departure and return trip.
Passenger loads (Crowding): Trips at or greater than 95% of capacity	Trips are crowded if they reach 95% or greater capacity as regulated by the U.S. Coast Guard, more than five times per month over a 12-month period.
Schedule reliability: trips departing more than five minutes late	Trip departures within five minutes of the published schedule are on time. The overall goal is for 98% of all trips to be on time.

* Daily ridership data for DART is not available - DART vehicles are not outfitted with automated passenger counters on board.

Appendix H: Route Productivity

Thresholds are different for each service type and day period. Rural and Dart routes are not evaluated based on Saturday and Sunday productivity data.

Productivity data for partially and fully suspended routes is not representative of typical performance. Similar to the 2021 System Evaluation, this productivity analysis will not directly inform service reductions for the 2022 system evaluation because many routes are still suspended or have canceled trips due to lingering impacts from the pandemic.

Service Family	Time Period	Bottom 25 Threshold Rides	Bottom 25 Threshold Miles
