

Public Health Updates

King County Board of Health

March 17, 2022

Dennis Worsham
Interim Director

An aerial photograph of a tropical coastline. The top half of the image shows lush green hills with scattered small buildings and roads. The bottom half shows a dark blue ocean with white waves crashing against a rocky shore. The word "OVERVIEW" is written in large, white, bold, sans-serif capital letters across the middle of the image, with the "O" and "V" being particularly large.

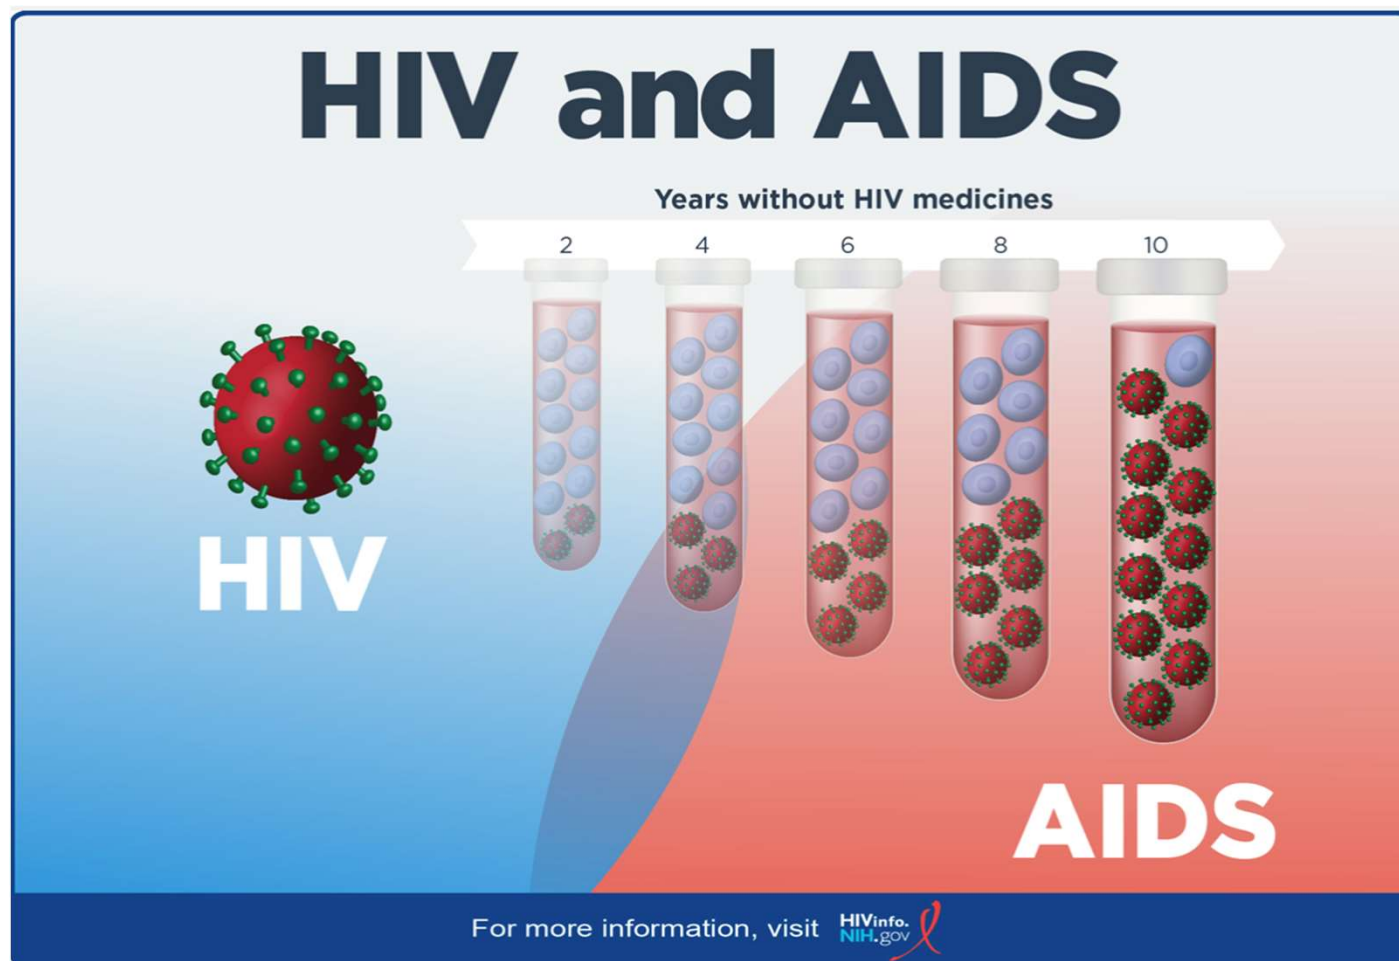

OVERVIEW

Program updates

- HIV/STD program
- Latent Tuberculosis
- Parent-Child telemedicine
- Onsite Septic
- Food Insecurity
- COVID learnings

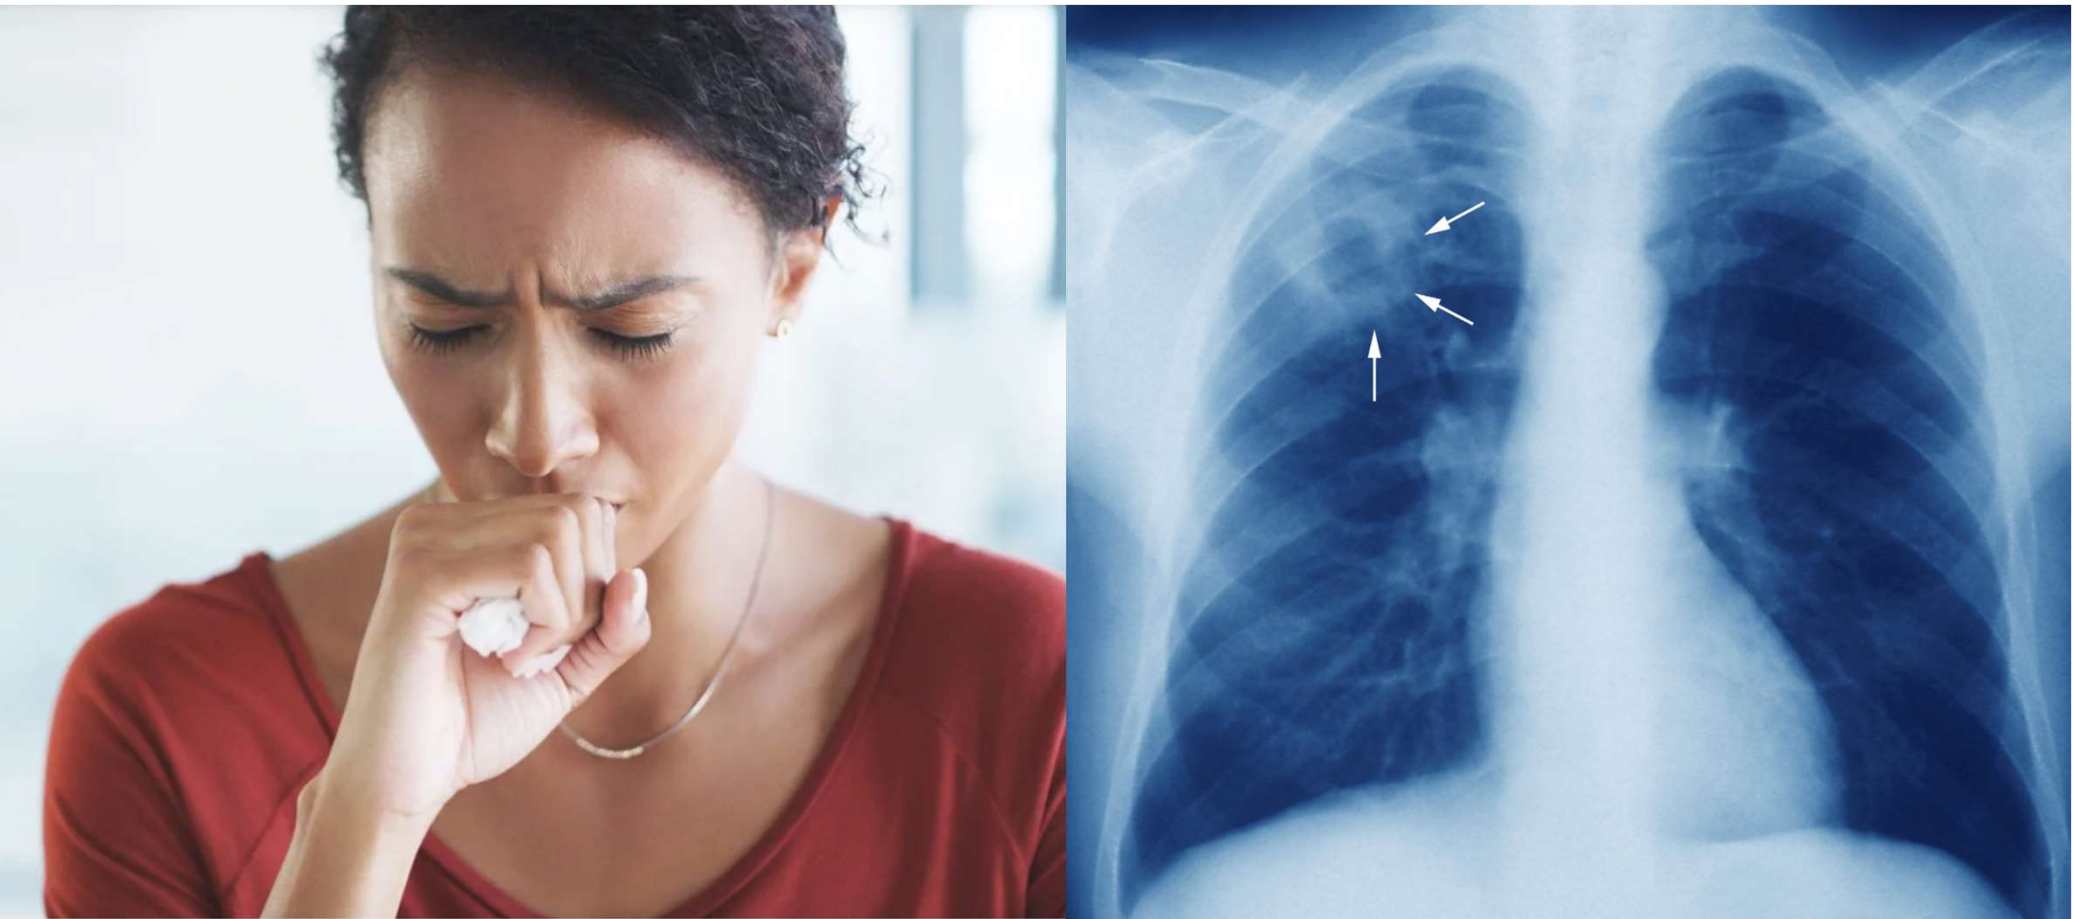

HIV: Ending the HIV Epidemic Initiative

Our goal is to decrease HIV incidence by 90% by 2030. To decrease it, more people must be virally suppressed. With early treatment, we can suppress viral loads and reduce transmission.

Latent Tuberculosis Program

Our 10-year goal for TB elimination is to reduce active TB cases by focusing on reducing latent TB infection (LTBI)

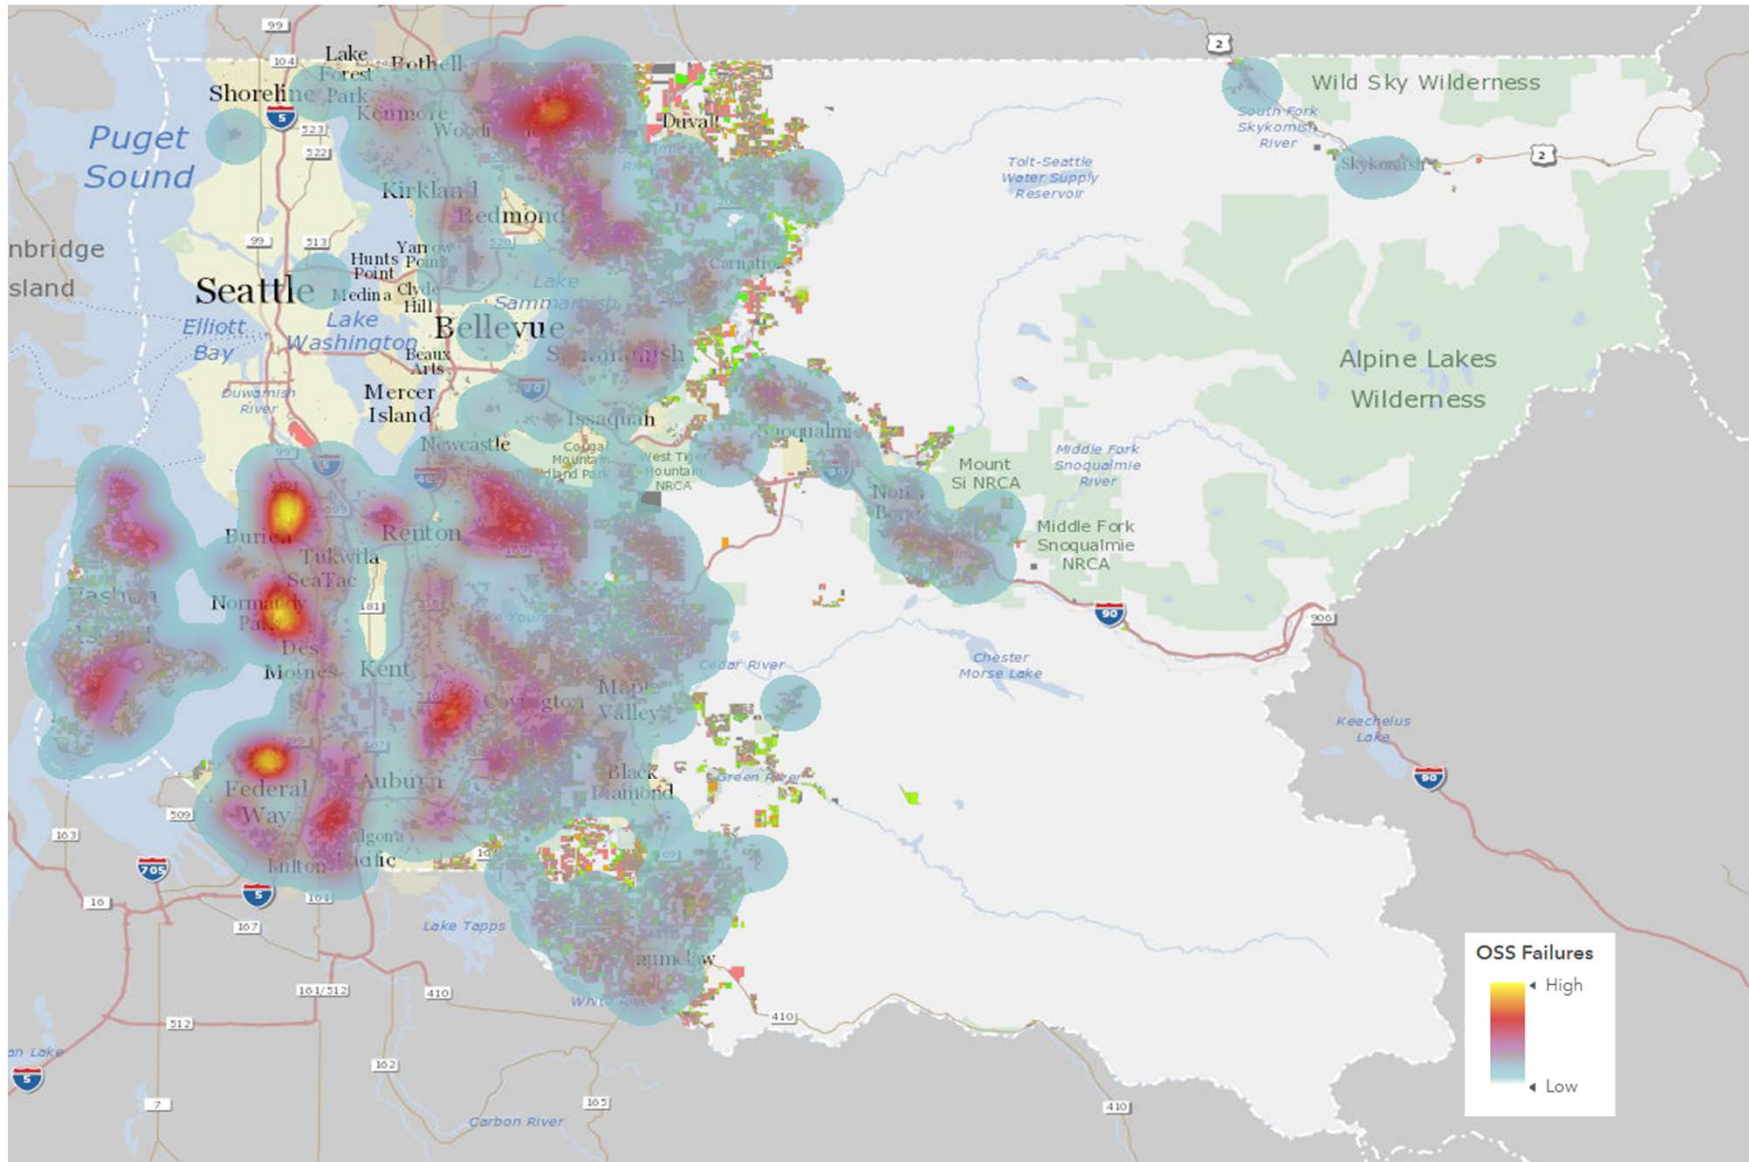

Parent-Child Health and Telemedicine

Our goal is to support families with pregnancy and early childhood services, including nutrition. During the pandemic, we used telemedicine when families could not come into the clinic.

Equitable Wastewater Future Planning

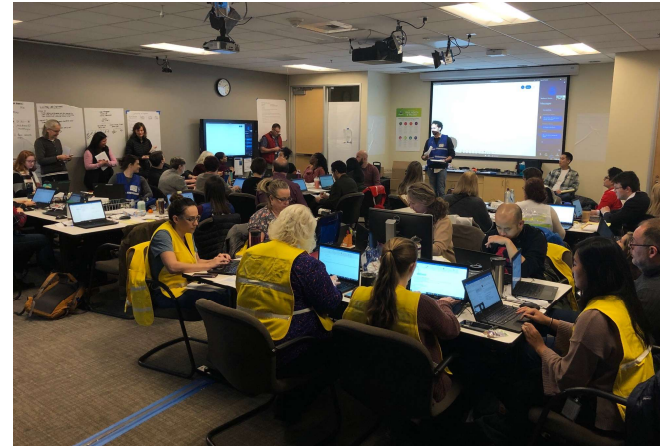

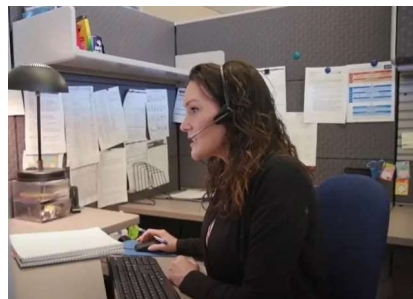

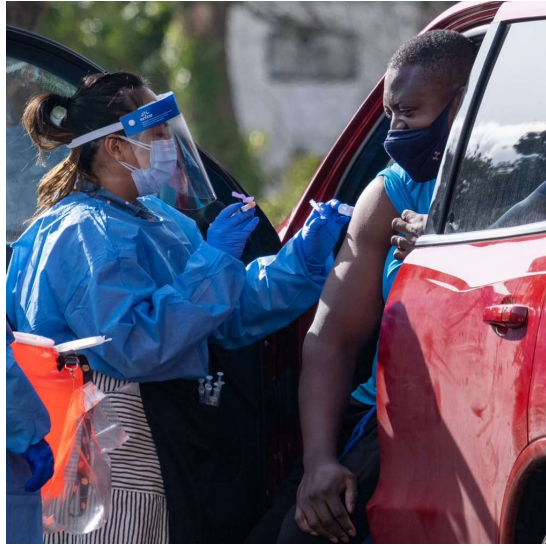

Heat map showing density of OSS failures during 2013-2017

King County Food Security Assistance Program

Our goal is to Increase food security by improving access to food

Silver linings: Our incredible staff
