Immunization data obtained from Washington State Immunization Information System (WSIIS) maintained by Washington State Department of Health.

All King County adolescents aged 11-17 years by December 31, 2017 with information on gender and a valid residential address in the WSIIS dataset were included. All vaccines were administered by December 31, 2017. Percentages were calculated using the number of specified adolescents residing in each census tract with the specified number of vaccine doses as the numerator and the total number of specified adolescents residing in each census tract as the denominator. Percentages for census tracts with less than 30 adolescents not shown due to unreliable estimates.
